## List of Contents

### NUMBER 1

| | | |
|---|---|---|
| **R. G. Selfridge** | 1 | Analysis of 6 link revolute arms |
| **B. Benhabib** and **E. Tabarah** | 9 | Optimal joint trajectory planning for coordinated point-to-point motion of two-arm manipulators |
| **Xu Wei-Liang** and **Zhang Qi-Xian** | 19 | Probabilistic analysis and Monte Carlo simulation of the kinematic error in a spatial linkage |
| **Xiaochun Gao, Zhiying King** and **Qixian Zhang** | 29 | A hybrid beam element for mathematical modelling of high-speed flexible linkages |
| **Teunis Koetsier** | 37 | The centenary of Ludwig Burmester's "Lehrbuch der Kinematik" |
| **I. D. Akçali** and **G. Dittrich** | 39 | Function generation by Gallerkin's method |
| **I. D. Akçali** and **G. Dittrich** | 45 | Path generation by subdomain method |
| **J. Agulló, S. Cardona** and **J. Vivancos** | 53 | Dynamics of vehicles with directionally sliding wheels |
| **Pi-Ying Cheng, Chao-Kuang Chen** and **Cheng-I. Weng** | 61 | Application of symbolic representation method to the inverse kinematics problem of robot manipulators |
| *Software Survey Section* | I | |
| *New Patents* | V | |

### NUMBER 2

| | | |
|---|---|---|
| **J. Hirschhorn** | 73 | Path curvatures in three-dimensional constrained motion of a rigid body |
| **Jerald M. Henderson** and **Kathleen A. Faustini** | 83 | Graphical aid for planetary gear train design |
| **D. R. Kerr** and **D. J. Sanger** | 87 | The inner product in the evaluation of reciprocal screws |
| **I. S. Kochev** and **G. H. Gurdev** | 93 | Balancing of linkages under the combined action of inertia and external forces |
| **Liu Der Yong** and **Huang Zhen** | 99 | Input torque balancing of linkages |
| **C. G. Gibson** and **D. Marsh** | 105 | On the linkage varieties of Watt 6-bar mechanisms—I. Basic geometry |
| **C. G. Gibson** and **D. Marsh** | 115 | On the linkage varieties of Watt 6-bar mechanisms—II. The possible reductions |

| | | |
|---|---|---|
| **C. G. Gibson** and **D. Marsh** | 123 | On the linkage varieties of Watt 6-bar mechanisms—III. Topology of the real varieties |
| **G. White** | 127 | Early epicyclic reduction gears |
| *Software Survey Section* | I | |
| *New Patents* | V | |

**NUMBER 3**

| | | |
|---|---|---|
| **F. Sticher** | 143 | On the finite screw axis cylindroid |
| **J. R. Hewit** | 157 | An approach to the control of robot arms with flexible transmission elements |
| **Michel Fayet** and **Marc Renaud** | 165 | Quasi-minimal computation under an explicit form of the inverse dynamic model of a robot manipulator |
| **Krzysztof Jankowski** | 175 | Dynamics of controlled mechanical systems with material and program constraints—I. Theory |
| **Krzysztof Jankowski** | 181 | Dynamics of controlled mechanical systems with material and program constraints—II. Methods of solution |
| **Krzysztof Jankowski** | 187 | Dynamics of controlled mechanical systems with material and program constraints—III. Illustrative examples |
| **C. H. Chiang, E. Pennestrì** and **Wen-Yeuan Chung** | 195 | On a technique for higher order synthesis of four-bar function generators |
| **T. Wren, J. N. Fawcett** and **J. S. Burdess** | 207 | Application of extensible catenary theory to determine the displacement of a moored ship |
| **J. R. Colbourne** | 213 | The curvature of helicoids |
| **J. R. Colbourne** | 223 | The contact stress in Novikov gears |
| *Corrigenda* | 230 | |
| *Software Survey Section* | I | |
| *New Patents* | V | |

**NUMBER 4**

| | | |
|---|---|---|
| **Marco Giovagnoni** and **Aldo Rossi** | 231 | Transient analysis of a flexible crank |
| **Da Zhun Xiao** and **An Tzu Yang** | 245 | Kinematics of three dimensional gearing |

| | | |
|---|---|---|
| **F. W. Liou** and **Arthur G. Erdman** | 257 | Experimental motion analysis of flexible mechanism and drive system using high-speed camera and digital imaging technique |
| **J. Eddie Baker** | 267 | Overconstrained five-bars with prismatic joints and parallel adjacent joint axes |
| **Gao Feng** | 275 | Complete shaking force and shaking moment balancing of four types of six-bar linkages |
| **Yu Hon-Cheung** | 289 | Two deformable patterns of 4-bar loops |
| **Clément Gosselin** and **Jorge Angeles** | 293 | Optimization of planar and spherical function generators as minimum-defect linkages |
| **V. P. Agrawal** and **J. S. Rao** | 309 | Identification and isomorphism of kinematic chains and mechanisms |
| *Book Review* **P. Maißer** | 323 | Dynamics of Multibody Systems, by R. E. Roberson and R. Schwertassek |
| *Software Survey Section* | I | |
| *New Patents* | V | |

**NUMBER 5**

| | | |
|---|---|---|
| **Vasanti Masurekar** and **K. N. Gupta** | 325 | Theoretical and experimental kineto elastodynamic analysis of high speed linkage |
| **Bahir H. Eldiwany** and **Kurt M. Marshek** | 335 | Experimental load distributions for double pitch steel roller chains on polymer sprockets |
| **Mohammad R. Naji** and **Kurt M. Marshek** | 351 | The effects of the pitch difference on the load distribution of a roller chain drive |
| **T. A. Stolarski** | 363 | Analysis of epicyclic gear train with deformable ring |
| **T. A. Stolarski** | 373 | Friction in a pin-on-disc configuration |
| **Pietro Fanghella** and **Carlo Galletti** | 383 | Particular or general methods in robot kinematics? Both particular and general |
| **Jinesh Jain** and **Anand M. Sharan** | 395 | The inverse velocity and acceleration analyses of robots of arbitrary architecture subjected to various types of constraints |
| **D. F. Bartolone** and **A. A. Shabana** | 411 | Effect of beam initial curvature on the dynamics of deformable multibody systems |

**Bekir Dizioğlu** 431 Kinematische Geometrie der Axoiden und die Bahnfläche einer Geraden

**A. Shchuka** and **A. A. Goldenberg** 439 Tip control of a single-link flexible arm using a feed-forward technique

*Book Reviews*

**F. Erfurt** 457 Finite Element Analysis for Engineering Design. Edited by J. N. Reddy, C. S. Krishnamoorthy and K. N. Saeetharamu

**J. Giergiel** 457 Theory of Machines and Mechanisms. By A. Morecki and J. Oderfeld

*Software Survey Section* I

*New Patents* V

**NUMBER 6**

## *MACHINES AND MECHANISMS*

***Selected Proceedings of the National Conference, Bombay, India, 1987***

**S. Krishnamoorthy** 459 A brief report on the *National Conference on Machines and Mechanisms* held at Bombay, India

**S. Mohan Kumar, S. G. Dhande** and **M. K. Muju** 463 Computer-aided design of work dependent cams for single spindle automats

**V. K. Mahna** and **N. T. Asnani** 473 Computer-aided kinematic analysis of basic spatial mechanisms

**C. V. R. Reddy, T. S. Krishnamurthy, S. Haranath** and **T. N. Suresh** 481 Free vibration studies on typical large flexible space-craft appendages under vacuum conditions

**S. Krishnamurthy** and **A. Ramamohana Rao** 493 Effect of Sursulf treatment on fatigue life of medium carbon steel spur gears

**M. R. Raghavan** and **R. Jayachandran** 499 Analysis of the performance characteristics of a two-inertia power transmission system with a plate clutch

**B. Kishor** and **S. K. Gupta** 505 On the dynamic loading of gear teeth as affected by journal motion in a hydrodynamic bearing–rotor-gear pair system

**S. H. Lohiya** and **S. S. Pande** 515 Analysis of tapered land aerostatic thrust bearing operating under nonsteady loads

**D. P. Naik** and **C. Amarnath** 523 Synthesis of adjustable four bar function generators through five bar loop closure equations

**A. J. Kothadia** and **S. Krishnamoorthy** 527 Intersecting inflection circles in four bar mechanisms adjustable for velocities

*Software Survey Section* I
